Digital Europe
monetization of art, reshaping the value of European Civilization

Dr Henry B. Won (Ying Wan)
The Background and current status

Necessity and feasibility

Procedure and Prospects
The background and current status

European Civilization  Historical relics  Current status  Digitalization of historical relics
European Art

Numerous museums

Advanced art system
The emergence of blockchain technology

The inconvenience of art transactions

Fake art affects trading

European economic recession and the world sovereign currency credit collapse

The emergence of block chain technology
Digital currency

The emergence of bitcoin and other digital currencies
Disadvantages of digital money in the market today

- It is just a string of numerals, which is of no value in itself.
- It is easy to be hyped up and the price fluctuates greatly.
- There are no specific financial regulations to supervise suppliers.
Necessity

The universality of European art relics

Solve the problem of asymmetric information and low circulation efficiency

Rejuvenation of European Civilization

Get huge economic benefits
Development of bitcoin and other digital currency

Development of block chain

Collapse of sovereign currency credit

Reuse of the value of art relics
Procedure

1. Digitalization of cultural relics and works of Art
2. Build a wide range of application scenarios, starting from the art trading and auction market
3. Digital money issue based on artwork relics
4. Art digital money extends from art auction markets to other markets.
Prospects

- New payment currency
- Universal world currency
- Human civilization and artistic creation have been highly developed
- Great circulation of art in Europe and the world
Thanks !
